

NYX Cosmetics Project Profile

The Performance Operations team helped NYX Cosmetics design and implement a “WMS Lite” front end to Microsoft Dynamics/GP which helped them execute in the warehouse while growing prior to acquisition by L'Oréal.

Also of critical importance, the Performance Operations team helped design a new warehouse space including racking and material handling options, assist with the optimization of the new space, manage all aspects of the build out of the space as well as the move to the new space. Another Performance Operations client was moving out of the new space and the PerfOps consultants working for both clients were able to connect and help work out overlap in the move timing to the benefit of both clients. Our testimonial from the NYX Cosmetics executives involved was that this build-out came just in time to further NYX's growth and was of great benefit to NYX's subsequent acquisition.
